Organized Health Care Arrangement Designation

An Organized Health Care Arrangement (OHCA) is a collaborative structure within our health system aimed at improving care coordination and health care delivery for our patients and health plan members. Jefferson Health has designated our health care provider entities as a single covered entity known as an affiliated covered entity (ACE) under HIPAA. We also own organizations that provide support to our providers in achieving these goals (i.e., Thomas Jefferson Jeffcare, Inc. (PHO), Jefferson Alliance, LLC (CIN), and Einstein Care Partners (ACO)) and they participate in our OHCA. The JH ACE and Jefferson Health Plans, together with the medical staff at our hospitals and our accountable care organizations and clinically integrated networks, engage in various joint activities that qualify as an organized health care arrangement activities.

TJU also owns Jefferson Health Plans that are regulated as HIPAA covered entities. The joint activities of our providers and health plans in organized health care arrangements enables the sharing of information on patients in order to carry out treatment, payment and health care operations related to the OHCA and achieve the health system's objectives of improving lives throughout the region. These activities include conducting analysis necessary for quality assessment and improvement, utilization review, and payment activities for the efficient delivery of care, the development of quality measures, and innovative population health and care coordination solutions.

OHCAs foster a streamlined healthcare delivery system. As part of our health care operations, each entity operates independently but collaborates to share patient information in compliance with HIPAA, ensuring coordinated, high-quality care for our community. Our arrangements enhance communication and collaboration between and among our physicians, hospitals, medical staffs, accountable care organizations, and health plans to promote continuity of care and efficiency while enhancing the overall healthcare experience. By sharing patient information for common goals and objectives, this collaboration ensures a more integrated approach to population health in our community, ultimately enhancing and improving quality, efficiency, and patient outcomes.
